

Cellami - Certification Testing Guide

App Name: Cellami
Version: 1.2.0
Publisher: Cameron Kish
Category: Productivity / AI Assistant
Platform: Excel (Desktop & Online)

1. Overview

Cellami is a privacy-focused AI assistant that runs entirely on the user's local machine. It integrates with Excel to provide AI-powered data analysis, document Q&A, and conversational capabilities.

⚠ Important: This add-in requires a companion desktop application (Cellami.app for Mac or Cellami.exe for Windows) to function. The add-in alone will not work without the desktop app running.

2. Testing Requirements

Software Required

Component	Download URL	Required?
Cellami Desktop App (Mac & Windows)	GitHub Releases	Yes

Ollama (AI Backend)	ollama.com	Yes
---------------------	---	-----

 **No Accounts Required:** No login, license keys, or external API credentials are needed. All processing happens locally.

3. Installation Steps

Step 1: Install Ollama

1. Download Ollama from ollama.com
2. Install and launch Ollama
3. Open Terminal (Mac) or Command Prompt (Windows)
4. Run: `ollama pull gemma3:4b`
5. Wait for the model to download (~3GB)

Step 2: Install Cellami Desktop App

Download the appropriate version from [GitHub Releases](#):

For Mac:

1. Download `Cellami_Mac.zip`
2. Unzip the file
3. Move `Cellami.app` to Applications folder
4. Right-click → Open (first time only, to bypass Gatekeeper)
5. Look for Cellami icon in the menu bar (top-right of screen)

For Windows:

1. Download `Cellami-Windows-x64.zip`
2. Extract the zip file (Right-click → Extract All)

3. Run `Cellami.exe`
4. Allow any firewall/security prompts
5. Look for Cellami icon in the system tray (bottom-right of screen)

Step 3: Load the Add-in in Excel

You can test the add-in in either **Excel Desktop** or **Excel Online** (browser). Both methods work, but Excel Online is the easiest for testing:

Option A: Excel Online (Recommended for Testing)

1. Go to excel.office.com in your browser (Refer to "6. Browser Compatibility").
2. Create or open a workbook
3. Go to Insert → Add-ins → Upload My Add-in
4. Upload the Cellami manifest file
5. The Cellami panel will appear on the right side

Option B: Excel Desktop

1. Open Microsoft Excel on your computer
2. Go to Insert → My Add-ins
3. Load the Cellami add-in
4. The Cellami panel will appear on the right side

4. Feature Testing Guide

Feature 1: Chat with Data

Description: Have a free-form conversation with your spreadsheet data. Ask questions, get summaries, and receive AI-powered insights.

How to Test:

1. Enter some sample data in Excel (e.g., sales figures, names, dates)
2. Open the Cellami panel
3. Go to the "Chat" tab
4. Type a question like "Summarize this data" or "What's the total?"
5. Verify the AI responds with relevant information (make sure you click the icon to add cell data to the prompt).

Feature 2: Query Cells

Description: Select specific cells and ask the AI to process, analyze, or transform the data.

How to Test:

1. Select one or more cells containing data
2. Use the "Query" feature in the Cellami panel
3. Ask a question about the selected data
4. Verify the AI response is contextually relevant to the selection

Feature 3: Query Tables

Description: Analyze entire tables at once. Select a range of data for comprehensive insights.

How to Test:

1. Create a table with multiple rows and columns
2. Select the entire table range

3. Ask the AI to analyze trends, find patterns, or summarize
4. Verify the response considers the full table context

Feature 4: Knowledge Base

Description: Upload documents (PDF, Word) and ask questions based on their content.

How to Test:

1. Go to the "Knowledge Base" tab
2. Upload a test document (PDF or DOCX)
3. Wait for processing to complete
4. Ask a question related to the document's content
5. Verify the AI uses document context in its response

Feature 5: Audit Trail

Description: View which document chunks were used to generate each response for transparency.

How to Test:

1. After receiving a Knowledge Base response (through a chat, cell query, or table query), click "Audit"
2. Verify source citations are displayed
3. Confirm the cited passages match the response context

5. Expected Behaviors

Scenario	Expected Behavior
Desktop app not running	Add-in shows "Connection Failed" with instructions to start the app
Ollama not installed	Add-in prompts user to install Ollama and download a model
First SSL connection	Browser may prompt to trust the local certificate
Chrome/Edge users	May need to adjust "Local Network Access" flag (instructions shown in add-in)

6. Browser Compatibility

Browser	Compatibility	Notes
Safari	✓ Excellent	Works out of the box
Firefox	✓ Excellent	Works out of the box
Chrome / Edge	⚠ Requires Setup	May need to disable "Local Network Access" flag

7. Contact & Support

Resource	URL
Support Page	cellami.vercel.app/support.html
Privacy Policy	cellami.vercel.app/privacy.html
Terms of Use	cellami.vercel.app/terms.html
GitHub Issues	github.com/CameronKish/Cellami/issues

8. Demo Screenshots

The following screenshots demonstrate each feature. Full animated demos (GIFs) are available in the [GitHub readme](#).

Knowledge Base Demo

Upload documents and ask questions based on their content. The AI uses local embeddings to find relevant passages and generate accurate responses.

File: assets/Cellami Knowledge Base Demo.gif

Cell Query Demo

Select specific cells and query the AI about that data. Perfect for quick analysis or transformation of individual data points.

File: assets/Cellami Cell Query Demo.gif

Table Query Demo

Analyze entire tables at once. Select a range and ask for comprehensive insights, trends, or summaries across all the data.

File: assets/Cellami Table Query Demo.gif

Chat Demo

Free-form conversation with your Excel data. Ask follow-up questions and maintain context throughout the session.

File: assets/Cellami Chat Demo.gif

Audit Demo

Transparency feature that shows exactly which document chunks were used to generate each

response. Trace every answer back to its source.
